North South University

Department of Electrical & Computer Engineering

PROJECT PROPOSAL

Course Code	CSE311L
Course Title	Database Systems Lab
Faculty Name	Ms. Tanzilah Noor Shabnam [TnS1]
Lab Instructor	Md. Amanullah Shah
Section	06
Group Number	10
Date of Submission	12th March 2026
Group Members Name & ID	Ahsanul Haque 2411830642 Nafisa Nawal Erisha 2413455642

Project Proposal — Submission Form

1. Project Title & One-Line Description

Title: SubTrack - Subscription and Free Trial Manager
Description: A web application that allows users to securely manage recurring digital subscriptions, categorize their expenses, and easily monitor expiring free trials to prevent unwanted charges.

---

2. Problem Statement

Many users sign up for various free trials or monthly digital subscriptions across different categories (like streaming, software, or gym memberships) and forget to cancel them, leading to wasted money. Manually tracking these dates across isolated platforms is inefficient and error-prone. A relational database system is needed to securely store user accounts, maintain a standardized directory of subscription services, and link individual users to their specific active plans to accurately calculate monthly costs and track expiration dates.

---

3. Core Features / Scope

- **User Authentication:** A secure login/logout system so users can exclusively manage their own private subscription data.
- **Categorized Service Catalog:** A centralized database of popular services (e.g., Netflix, Adobe, iCloud+ etc) organized by categories (e.g., Entertainment, Productivity) to standardize data entry and demonstrate relational database mapping.
- **Subscription Management (CRUD):** Users can add new personal subscriptions by selecting from the catalog (Create), view their active list (Read), update billing dates or costs (Update), and mark a subscription as canceled (Delete).
- **Free Trial Tracker:** A dynamically filtered dashboard view that sorts active free trials by their expiration dates, helping users cancel before being charged.
- **Expense Analytics:** A query-driven feature that calculates the total weekly, monthly or yearly costs of all active subscriptions for the logged-in user.

4. Team Roles

Student Name	Student ID	Role
Ahsanul Haque	2411830642	**Database Designer & Backend Developer:** Focuses on SQL schema creation, ERD design, database connections, and building backend CRUD logic.
Nafisa Nawal Erisha	2413455642	**Frontend Developer & Authentication:** Focuses on UI design, data presentation, Login/Logout functionality, and HTML form data validation.
